ROGER MILLA
PROGRAM
CHARITY FOR CHILDREN

OFFICIAL PRESENTATION DOSSIER

November 2026

Together, let’s bring health,
dignity and hope to children.

Every action counts.

Noma awareness · Facial surgery
Safe drinking water · Humanitarian solidarity

DISCOVER OUR CAUSES

www.rogermilla-program.org

1. Introducing the Roger Milla Program

The **Roger Milla Program** is a solidarity initiative led by its Founder and President, Roger Milla, to mobilise individuals, businesses, professionals and institutions in support of the most vulnerable children.

Its work focuses on noma awareness, access to facial surgery, safe drinking water and humanitarian solidarity.

The programme seeks to turn sport's power to bring people together into lasting support for children and their families. It combines awareness activities, partnership development, fundraising and project preparation.

This dossier presents the programme's direction and its five main causes. Objectives and planned activities remain distinct from funds actually received and documented achievements.

2. A Message from Roger Milla

"Football has taught me that great victories are achieved together. Today, I want to put that collective strength at the service of children.

Through the Roger Milla Program, we want to mobilise everyone who can help improve children's access to healthcare, safe drinking water and dignified living conditions.

Our ambition requires perseverance, expertise and partners. It also requires clarity: explaining what we are preparing, which resources have been secured and what has been accomplished.

I invite you to join this commitment in whatever way you can. Together, let's bring health, dignity and hope to children.

Every action counts."

Roger Milla
Founder and President of the Roger Milla Program

3. Vision, Mission and Principles

Our vision
A future in which the most vulnerable children can access appropriate healthcare, safe drinking water and support that respects their dignity.

Our mission
To mobilise resources, expertise and partnerships to prepare and support activities addressing these needs.

- **Dignity:** portray children and their families respectfully, without defining them by illness or vulnerability.
- **Clarity:** explain the intended use of contributions and the actual status of projects.
- **Responsibility:** align commitments with available resources and operating conditions.
- **Cooperation:** seek the expertise and partnerships needed.
- **Sustainability:** address operations, maintenance and monitoring from the project preparation stage.

4. The Five Main Causes

4.1. Special Fund for Children Waiting for Facial Surgery

Purpose: finance future free care.

This fund aims to build resources for the free care of children across Africa living with the long-term effects of noma or a congenital facial malformation, at the future Roger Milla Hospital Centre of Excellence.

Funds raised are intended to be held in a dedicated reserve within the **ROGER MILLA INTERNATIONAL SOLIDARITY FUND**, for use once the centre becomes operational.

Arrangements for managing, safeguarding, overseeing and releasing these funds must be formalised and communicated to donors. Conditions applicable in the event of prolonged delays or an inability to deliver the project must also be specified.

Intended allocation: children's future free care, within a scope of support to be defined.

Status presented: preparation of the fundraising mechanism and its management arrangements. No secured funding amount is substantiated by the information assembled for this dossier.

4.2. Roger Milla Hospital Centre of Excellence Project

Purpose: support the centre's construction and equipment.

Proposed location: YAOUNDÉ - Cameroon.

The project's purpose is to provide:

Free maxillofacial and reconstructive surgery for children across Africa living with the long-term effects of noma or a congenital facial malformation.

Project preparation must define the centre's clinical organisation, capacity, equipment, staffing requirements and operating model.

Contributions allocated to the hospital project are intended to support studies, infrastructure development and the acquisition of necessary equipment.

Intended allocation: preparation, construction and equipment of the centre.

Status presented: project under preparation. The final budget, timetable and capacity remain to be consolidated in light of studies, authorisations and funding.

Essential distinction: this fundraising stream is separate from the fund dedicated to children's future care.

4.3. Red Card to Noma

Purpose: support awareness and mobilisation.

The **"Red Card to Noma"** campaign uses football's symbolic power to raise awareness and bring supporters together.

It aims to engage families, the sporting community, artists, healthcare professionals, businesses and institutions.

- Developing and distributing information materials.
- Mobilising audiences through social media and the press.

- Organising awareness activities with partners.
- Promoting the petition against noma.
- Conducting institutional advocacy.

Health-related content must be developed or reviewed with qualified professionals.

Intended allocation: awareness materials, communication and mobilisation activities.

Public participation: signing the petition is free and independent of any donation.

4.4. Access to Safe Drinking Water in Africa

Purpose: support lasting access to safe drinking water in schools and villages.

The programme aims to support solutions adapted to local needs, addressing water quality, maintenance and reliable long-term operation.

Schools component
Facilitate access to safe drinking water every school day and improve conditions for handwashing and daily hygiene.

Villages component
Support nearby water points and involve communities in their management and maintenance.

Depending on assessments and needs, activities may include constructing or rehabilitating boreholes, network connections, pumps, storage tanks, treatment systems and distribution points.

Each operation must specify its location, intended beneficiaries, technical solution, budget, management responsibilities and maintenance arrangements.

Intended allocation: studies, installations, water-quality checks, maintenance and local support, according to each operation’s budget.

Status presented: individual operations must be defined and documented before commitments are made.

4.5. Gaza Emergency Appeal - Help Children Get Through the Winter

Purpose: support humanitarian assistance.

In partnership with **DIGNITÉ Internationale**, the Roger Milla Program seeks to mobilise support for children and families in Gaza.

- Tents and shelter solutions.
- Blankets and protection against the cold.
- Hot meals.
- Safe drinking water.
- Essential hygiene supplies.

Priorities must be adjusted to identified needs and the possibilities for procurement, access and distribution.

Intended allocation: humanitarian assistance and the resources needed to deliver it, according to arrangements agreed with the partner.

Expected reporting: documentation of funds transferred, purchases, distributions and difficulties encountered, while respecting people's safety and dignity.

5. Intended Beneficiaries

- Children across Africa living with the long-term effects of noma or a congenital facial malformation.
- Communities reached by noma awareness activities.
- Pupils and communities needing access to safe drinking water.
- Children and families receiving humanitarian assistance in Gaza.

Selection criteria and support arrangements must be specified for each activity. Clinical assessments and medical decisions are the responsibility of qualified professionals.

6. Organisation and Responsibilities

Roger Milla
Founder and President

Jean-Baptiste D. Tany
Director General

For each project, operational arrangements must define responsibilities for coordination, financial management, technical monitoring and communication.

Preparatory or steering bodies, delegated responsibilities and partnerships must be formalised as work progresses.

The identity, contact details and role of the entity receiving funds must be clearly stated on each fundraising platform or document.

7. Fundraising and Allocation of Funds

The guiding principle is to enable every contributor to understand the intended destination of their support.

Cause	Intended use
Special Fund for Facial Surgery	Children's future free care
Hospital Project	Studies, construction and equipment
Red Card to Noma	Awareness and mobilisation
Access to Safe Drinking Water	Operations in schools and villages
Gaza Emergency Appeal	Humanitarian assistance

Monitoring arrangements must distinguish funds by cause and document their use.

Any payment-processing, fundraising, coordination or implementation costs must be explained. No percentage of direct allocation should be advertised without supporting evidence.

Any change in allocation must comply with the conditions communicated to donors.

8. Partnerships and Institutional Engagement

The Roger Milla Program seeks partners able to contribute through:

- Medical, technical or organisational expertise.
- Financial or material support.
- Cooperation with healthcare or training institutions.
- Communication and outreach.
- Introductions or institutional support.
- Assistance in organising solidarity initiatives.

Engagement must be tracked, distinguishing prospective contacts, requests submitted, discussions underway and formalised agreements.

An invitation, a letter sent or a discussion does not, on its own, establish a confirmed partnership or secured funding.

9. Events and Public Mobilisation

Solidarity events can help raise awareness and mobilise support.

- The **Roger Milla Program Charity Gala - 2027 Tour**, supporting the hospital project.
- The **Charity Dinner Tour**, supporting the Gaza Emergency Appeal.
- Fundraisers organised with individuals, associations or businesses.

Cities, dates, venues, participants and attendance arrangements must be confirmed before being presented as firm commitments.

Financial reporting must distinguish gross proceeds, organisational costs and the net amount allocated to the cause.

10. Transparency and Monitoring

Project reporting must distinguish between:

- Announced objectives.
- Expressions of interest or pledges of support.
- Formalised commitments.
- Funds actually received.
- Expenditure incurred.
- Documented results.

Communications must report significant progress, difficulties and next steps.

Indicators will be adapted to each cause: materials distributed and documented engagement, progress on hospital studies, resources received and available, functioning water installations, or humanitarian assistance actually distributed.

Personal data and medical information must be protected. Images and testimonies must be used with appropriate consent and respect for people’s dignity.

11. Financial Position Presented

This dossier does not constitute confirmation of funding.

The information available for its preparation does not substantiate a consolidated amount of funds actually received, available or contractually secured for the five causes.

Forecast budgets and fundraising targets must be presented in project-specific annexes stating their date, scope and assumptions.

An updated financial statement must detail receipts, expenditure, commitments and available balances for each cause.

12. Next Steps

Priority	Expected outcome
Formalise the flow of donations	Identify recipient entities, responsibilities and allocation rules
Establish the Special Fund’s framework	Define the reserve, oversight and release conditions
Consolidate the hospital project	Develop a coherent clinical programme, studies, budget and timetable
Define initial drinking-water operations	Select locations and establish technical solutions and maintenance plans
Specify monitoring of assistance in Gaza	Define contribution arrangements and required supporting documentation
Structure partnerships	Formalise commitments and responsibilities
Publish regular updates	Communicate documented progress and use of resources

Deadlines will be established according to decisions taken, available funding and implementation conditions.

13. Key Risks and Considerations

Funding: the launch and continuity of activities depend on resources actually mobilised.

Hospital project: delivery depends on studies, authorisations, expertise and operating resources.

Safe drinking water: technical suitability, water quality and maintenance determine the sustainability of installations.

Humanitarian assistance: access and security conditions may restrict or delay distributions.

Contributors’ trust: confidence depends on accurate progress reporting, clear allocation of donations and documented accounts.

14. Join the Roger Milla Program

Everyone can contribute in their own way: choose a cause and donate, share a campaign, sign the petition against noma, offer expertise or propose a partnership.
